## The following Works are just published,

## ANDREW MACKAY, LL.D. F.R.S. Ed. &c.

I.

In One large Volume, Octavo, illustrated with Engravings, &c. Price 10s. 6d. bound

THE

## COMPLETE NAVIGATOR;

### AN EASY AND FAMILIAR GUIDE

TO THE

## THEORY AND PRATICE OF NAVIGATION,

WITH ALL THE REQUISITE TABLES, &c.

Printed for Longman, Hurst, Refs, and Orme, No. 39, Paternoster-row; W. J. and J. Richardson, Royal Exchange; Blacks and Parry, Leadenhall-street; A. Constable and Co. Edinburgh; and may be had of the principal Booksellers of the United Kingdom.

THE utility of the Art of Navigation to every commercial and maritime state is obvious; but to none more so than to Britain; and, as the lives and fortunes of many depend upon the accuracy of the rules and tables given in the books published on this subject, the greatest care imaginable ought, therefore, to be taken, in order to have them correct. This is not the case, however, with some of the most popular books; of which a few instances are pointed out in the preface to the present work, and which was one of the principal reasons for embarking in this undertaking. The author has spared neither labour nor expense to render it deserving or the public attention, and as perfect as possible. The work is divided into six books, in the following manner:

Book First contains—Definitions and principles necessary as an introduction to Navigation-An account of the various instruments which have been proposed to ascertain the distance run in a given time—The description of a Steering Compass—An account of the Tides, with various methods of finding the time of high water at any given place-The description of Gunter's Scale-A few of those definitions and propositions in Geometry necessary to understand the

Theory of Navigation-And Plane Trigonometry.

BOOK SECOND contains the several sailings commonly used in Navi-The first five of these sailings, namely, Plane, Traverse, Parallel, Middle Latitude, and Mercator's, sailings, are resolved by construction, calculation, inspection, and by Gunter's Scale.\* The other sailings being less used, are, therefore, only resolved by the two first of these methods. To this second book are added, various methods of constructing both Plane, and Mercator's Charts.

The THIRD BOOK contains the description, rectification, and manner of using Hadley's Quadrant, and Sextant; together with the method of finding the Latitude and Longitude of a Ship at Sea, and the Varia-

tion of the Compass from observation.

<sup>\*</sup> For the method of performing the several sailings, the journal, the latitude by double altitudes, variation of the compass, lunar observations, &c. by the Sliding Gunter, a reference has been made to the Treatise expressly on the use of that instrument, by the Author.

## Books published by Dr. Mackay.

In the Fourth Book is an account of a Sea Journal, with precepts for performing the same, exemplified in a journal proper for a long

voyage.

The FIFTH BOOK contains—The application of Trigonometry to the mensuration of heights and distances—The manner of surveying coasts and harbours, illustrated by an example—An account of the Winds—On predicting the Weather.

BOOK SIXTH contains the Tables, which are more extensive than in

any other book upon Navigation; with an Explanation prefixed.

### II.

## THE THEORY AND PRACTICE

OF FINDING

## THE LONGITUDE

AT SEA OR LAND;

TO WHICH ARE ADDED,

Various Methods of determining the Latitude of a Place, and the Variation of the Compass;

## WITH NEW TABLES.

The Second Edition, improved and enlarged, in Two Volumes, 8vo.
PRICE ONE GUINEA IN BOARDS.

The following is an Abstract of the Contents of this Work.

OF the Figure and Magnitude of the Earth; Definitions, Principles, &c.; of the Length of the Year; of the Fixed Stars, Planets, Moon, &c.

Of Hadley's Quadrant, the Sextant, and Circular Instrument; the Manner of taking a complete Set of Lunar Observations; of the Corrections to be applied to the Altitude of an Object observed at Sea,

and to the observed Distance between two Objects.

The Method of finding the Longitude by Lunar Observations, Historical Introduction; Preparatory Problems; Various Methods of ascertaining Time, and regulating a Chronometer, or Watch, at Sea or Land; of the Methods of clearing the Apparent Distance between the Moon and the Sun, or a fixed Star, from the Effects of Refraction and Parallax. Of finding the Longitude at Sea or Land.—1st. By Observations of the Distance between, and Altitudes of the Sun and the Moon.—2d. By an Observation of the Distance only.—3d. New Method of finding the Longitude, Latitude, Apparent Time, &c. from the same Set of Observations.—4th. Of finding the Longitude by an Observation of the Distance between the Moon and a Star not used in the Nautical Almanack.—5th. By an Observation of the Distance between the Moon's Transit over the Meridian.—7th. By the Meridian Altitude of the Moon.—8th. By the Moon's Altitude observed at any Time.—9th. By an Eclipse of the Moon.—10th. Of the Sun.—11th. By Occultations of fixed Stars by the Moon.—12th, By the Eclipses of the Satellites of Jupiter.—13th. By a Chronometer.—14th. And by the Variation Chart.

## Books published by Dr. Mackay.

The Demonstrations of the preceding Methods.

The Method of finding the Latitude by the Meridian Altitude of the Sun, Moon, fixed Stars, and Planets; by equal Altitudes; by double Altitudes of the Sun; by double Altitudes of the Moon; by double Altitudes of the fixed Stars; by three Altitudes of the Sun; and without the Sun's Altitude.

Of finding the Variation of the Compass, by an Observation of the Sun's Amplitude; by an Azimuth; by equal Altitudes of the Sun; with various other Methods of finding the Variation.

The second Volume contains seventy Tables, with their Explanation prefixed; and an Appendix, containing two Tables; the Method of finding the Time of the rising and setting of the Sun, Moon, and fixed Stars; the Time of the Beginning, End, and Duration of Twilight, &c.

## The following are Extracts from some of the Reviews, relative to the First Edition of this Work.

"From the preceding abstract of the contents of this valuable work, our readers will be better able to judge what information they may degive from it, than they could have been by any detached extract which we might have selected. Of the Author's extensive and accurate acquaintance with the subject to which he has directed our attention, none who peruse what he has written can entertain any doubt. To the Navigator and Astronomer, and also to the practical Geographer and Surveyor, this work will be instructive and useful. We cannot conclude without expressing our wishes, that the author may be suitably encouraged in the prosecution of the plan which he has undertaken, of publishing a distinct Treatise on the Theory, and Practice of Navigation, and another in three volumes on the Theory and Practice of Astronomy." Monthly Review for March 1794.

"Throughout the articles which we have specified, Dr. Mackay's zeal and ability to instruct his readers are equally manifest. He has not only written fully on the subjects themselves, but has also introduced such collateral matter as was likely to satisfy the inquisitive reader, and illustrate his principal design. In his description of instruments, we meet with the minuteness of an artist; in his application of them, we find the attention of an accurate observer; and in the demonstration of his rules, we see the precision of a practised geometrician." British Critic for March 1794.

"A very useful praxis and investigation of the various modes of finding the Longitude. The author first gives a concise account of the planetary system; then describes the various instruments used in taking altitudes; and after a sufficient number of preparatory problems, the mode of finding the Longitude by lunar observations; eclipses of the Sun and Moon; occultations of fixed stars by the Moon; eclipses of the satellites of Jupiter; by the chronometer; and the variation charts. The praxis is in the former; the demonstrations in the latter part of the first volume: the second volume contains the necessary tables. After each rule is a sufficient number of examples, to give a perfect knowledge of the use of it. The Navigator who has mastered the problems in this work, will not, with a clear sky over his head, find himself at a loss for his reckoning; and it might be made a useful compendium in a long voyage; for, by daily perusal, the younger proficients in the art of Navigation may acquire a taste for a mode of observation, which we fear, notwithstanding its evident utility, has by no means obtained general practice. In speaking this of younger proficients, we do not mean to say, that any person, whether on land or at sea, who employs himself in finding the Longitude of the place he is in, will not reap much advantage by having the rules and examples laid down in this work to guide him in his practice; for no method will easily occur, of which he will not find here an example."—Critical Review for August 1794.

"The Theory and Practice of finding the Longitude, &c. is a work which will be found of considerable utility and importance to the Navigator and to the Astronomer, as the author appears to be accurately acquainted with the subject on which he treats, and is perspicuous and satisfactory in his methods of explanation." New Annual Register, for 1793.
